1 Motivation

What is the maximum number of shots a player must drink if we stack the deck against that player.

2 Rules

This is a drinking game involving a standard deck of play cards. The game is played with no less than 6 players and no more than 8 players.

2.1 No Pointing

The players must not point with their fingers. Otherwise, they must take a shot as punishment.

2.2 Card Effects

The players take turns revealing a card from the deck. Each card has the following effects;

2s The player must pick another player. Both must take a shot.

3s The player must pick two other players. All three players must take a shot.

4s The player on left of the player who revealed the card must take a shot.

5s Every player must take a shot.

6s The player on the right of the player who revealed the card must take a shot.

7s The player must pick another player to battle. The loser becomes a member of *buddy gang*. The player is not allowed to battle a member of the *buddy gang*. If the player who revealed the card is a member of the *buddy gang* and win the battle, they transfer the membership status to the loser.

Otherwise, they remain a member. Whenever a member of the *buddy gang* takes a shot, the other members must also take a shot.

8s The player may choose to take a 30-second break from the game which pauses all rules. They may also choose to ignore the pause and continue playing.

9s Whenever a player draws a nine, every player plays a minigame. The *No Pointing* rule as well as the effects of *Jack*, *Queen*, and *King* are suspended during a minigame.

10s The player who draws a ten must cover their face with baby powder.

Jacks The player becomes a *Jack*. Only one *Jack* may be active at a given moment. The *Jack* may touch their face. Other players must mimic the *Jack* exactly. The last player to do so must take a shot.

Queens The player becomes a *Queen*. Only one *Queen* may be active at a given moment. If a player respond to the *Queen* in any way, they must take a shot.

Kings The player becomes a *King*. Only one *King* may be active at a given moment. The *King* must play a role or a character. If the *King* breaks character, they must take a shot.

Aces The player must take a shot.

3

The *No Pointing* rule as well as the effects of *Queen* and *King* can potentially make a player take infinitely many shots. To make the experiment more interesting, we will assume that everyone plays optimally. The effect of *Jack* will always force one player to take a shot even when everyone plays optimally, so we will ignore it too.

In other words, we will consider a hypothetical scenario in which the *No Pointing* rule does not exist. Jacks, Queens and Kings cards are treated as if they have no effects.
